Backend
- Node.js
- Laravel
- Nest.js

Database
- MYSQL
- MongoDB

Language

English

Amharic

Experience

2022 - Present

Hawi Software Solutions | Adama, Ethiopia

Mobile App Development

At Hawi Software Solution, I've played an integral role in the development of various mobile applications utilizing Flutter. Notably, I've contributed to the creation of a diverse range of applications, including a sophisticated music streaming app offering seamless playback and intuitive playlist management features. Additionally, I've been instrumental in crafting a student app tailored for academic management, empowering users to effortlessly access grades, payment information, and other essential academic details. Furthermore, I've been involved in the development of a comprehensive school management system, catering to the needs of parents, teachers, and administrators alike. Within this system, parents can conveniently monitor their child's academic progress, attendance records, and payment history, while also facilitating communication through integrated chat functionalities. For teachers, I've implemented features enabling them to efficiently record attendance, share educational materials such as PDFs and images with students, and engage in seamless communication for academic purposes. Additionally, I have successfully integrated the "Telebirr" payment system, enabling students to conveniently pay tuition fees, ID replacement fees, registration fees, and exam fees through the application. Throughout these projects, I've demonstrated proficiency in Flutter development, ensuring cross-platform compatibility, high-quality code standards, and optimal performance to deliver exceptional user experiences. Collaborating closely with multidisciplinary teams, I've contributed to the success of each project, prioritizing client satisfaction and the achievement of project objectives.

2021 - 2022

Freelance

Full Stack Web Development

I have been developing several web applications for various clients as a freelancer using JavaScript, React, Node.js and Laravel

Projects

- **Kuush Music Streaming App Available on Playstore**
- **Telebirr Super App for Harambee University**
- **Harambee Student App Available on Playstore**
- **Parent , Student, Teacher App For School Management System**
